

EXPOSURE CONTROL PLAN FOR BLOOD-BORNE PATHOGENS

The Santa Cruz County Superintendent of Schools (County Superintendent) or designee shall meet state and federal standards for dealing with blood borne pathogens and other potentially infectious materials in the work place. The Director of Human Resources or designee shall establish a written Exposure Control Plan designed to protect employees from possible infection due to contact with blood borne viruses, including human immunodeficiency virus (HIV) and hepatitis B virus (HBV).

The Director of Human Resources or designee shall determine which employees have occupational exposure to blood borne pathogens and other potentially infectious materials. In accordance with the Santa Cruz County Office of Education (SCCOE) Exposure Control Plan, employees having occupational exposure shall be offered the Hepatitis B vaccination.

The Director of Human Resources may exempt designated first-aid providers from pre-exposure Hepatitis B vaccination under the condition specified by state regulations. Any employee not identified as having occupational exposure in SCCOE exposure determination may petition to be included in the SCCOE employee in-service and Hepatitis B vaccination program. Any such petition should be submitted to the Director of Human Resources who shall evaluate the request and notify the petitioner of his/her decision. The Director of Human Resources may deny a request when there is no reasonable anticipation of contact with infectious material.
